

Absolutely! Let's create a new set of words, maintaining the same structure and categories, but focusing on a different topic. How about "**Ecosystems and Biodiversity**"?

Here's the new chart:

Example from a section on Ecosystems and Biodiversity

General English	General Academic Vocabulary	Discipline-Specific Vocabulary
plants	components	niche
animals	interactions	habitat
grow	analysis	keystone species
change	patterns	biodiversity
eat	data	trophic level
live	variables	symbiosis
make	theory	ecosystem services
need	evidence	succession
find	methodology	endemic
use	framework	biome

Explanation of Word Choices:

- **General English:** These are common words related to the topic of ecosystems and biodiversity.
- **General Academic Vocabulary:** These are words often used in academic contexts, applicable to various disciplines but relevant to the study of ecosystems.
- **Discipline-Specific Vocabulary:** These are terms directly related to ecology and biodiversity, more specialized and used within the field.

Let me know if you'd like another topic or any adjustments to this one!
